Lodash
Rest API
JSON
Git / Subversion
jQuery
Bootstrap / Material UI
VueJS / Vuex
ReactJS
PHP (Laravel)
Python (Flask)
ASP.Net MVC / C#

Recommendations

I coached Joe and have interacted with him several times since. He is an insightful and dynamic technical pro, and his enthusiasm when he is on the chase to a solution is catching. He is a frightfully quick learner; he implements changes immediately, but remains perfectly willing to challenge the idea until he understands and embraces it (something rare and valuable on development teams).

His work with Kendo UI was impressive enough that my boss, Pierre Bouchard the CDO, used it as a primary exemplar for several other teams facing the same challenges. If I were I to build a development team, Joe is an excellent example of the talent, personality and approach that would seek out.

Enthusiastic, dynamic and talented people share a common opportunity for improvement: Joe can be easily distracted by the innate "Ooh! Shiny!" response we all have when faced with a new and exciting technology or solution. To me this cannot be considered a weakness; without it, we lose the innovative drive that makes Joe invaluable.

The opportunity is in tempering the response without eliminating it.

Kevin Wells

Agile Development Coach

JPMorgan Chase

My name is Mosh Manresa, I'm an Associate Director in the Enhanced Client Services (ECS) Organization within AT&T's Sales and Service Management organization. I program manage ECS development, and I lead development on a couple key projects.

I brought Joe LoMoglio onto my team in early March 2016 to fulfill a UX design position on a team building a new reporting, metrics, and analytics application for ECS. He was instrumental in bringing the voices of the many stakeholders into the User Experience design of the application. Joe led the development team through the POC and Prototype phases of the project, providing the design artifacts and developing the UI layer of the ASP.NET MVC application.

Joe is a very talented and self-driven professional. He has a very methodical approach to design that is evident in the resulting product. He was also willing to learn new skills on the project. Joe will be a welcome addition to any team.

Mosh Manresa

Associate Director

AT&T Technology and Operations

Please accept my strong recommendation for Joe LoMoglio. Joe worked for me as a Lead Programmer in the development of 3D Learning Simulations. Using an Agile methodology, Joe lead the effort to build a 3D Simulation Generator to simplify and make more consistent the quality of 3D Learning Simulations the company was creating. He led a team of 6 developers and supported development teams in Poland and India.

Joe demonstrated a strong work ethic often working throughout the night to make deadlines. His developers were positively influenced by his example. Joe was able juggle the demands of the client and the need to develop supportable, stable, well documented code.

Joe has an in-depth knowledge of front end development. He converted the development team from using HTML5, CSS, and JavaScript to a JavaScript platform that he created, which improved development times significantly and made the development effort more scalable.
